

Pizza Chain Analytics

SQL Sales Dashboard Project

A hands-on SQL analytics project to explore pizza sales performance, customer preferences, revenue trends, and product insights.

Project Objective

The objective of this project is to analyze pizza sales data using SQL and build a strong foundation for a sales dashboard. The analysis focuses on key business metrics such as total orders, total revenue, best-selling pizzas, peak order hours, category performance, and revenue contribution over time.

Dataset Tables

Table Name	Purpose
orders	Stores order-level details such as order ID, date, and time.
order_details	Stores pizza quantity details for each order.
pizzas	Stores pizza size and price information.
pizza_types	Stores pizza name, category, and ingredients.

SQL Business Questions

Basic Level Questions

1. Retrieve the total number of orders placed.
2. Calculate the total revenue generated from pizza sales.
3. Identify the highest-priced pizza on the menu.
4. Identify the most commonly ordered pizza size.
5. List the top 5 most ordered pizza types along with their total quantities.

Intermediate Level Questions

1. Join the required tables to find the total quantity ordered for each pizza category.

2. Determine the distribution of orders by hour of the day.
3. Join relevant tables to find the category-wise distribution of pizzas sold.
4. Group orders by date and calculate the average number of pizzas ordered per day.
5. Determine the top 3 most ordered pizza types based on revenue.

Advanced Level Questions

1. Calculate the percentage contribution of each pizza type to total revenue.
2. Analyze the cumulative revenue generated over time.
3. Determine the top 3 most ordered pizza types based on revenue within each pizza category.

Skills Practiced

- SQL joins across multiple relational tables
- Aggregate functions such as COUNT, SUM, and AVG
- GROUP BY and ORDER BY for business reporting
- Revenue calculation using quantity and price
- Ranking top-performing products using revenue and quantity
- Time-based trend analysis
- Window functions for cumulative revenue and category ranking

Expected Dashboard Insights

After solving these SQL questions, the final dashboard can highlight overall sales performance, most popular pizza sizes, best-selling pizza types, high-revenue products, category-wise demand, peak order hours, and revenue growth over time. These insights can help the business improve menu planning, inventory management, staffing, and promotional strategies.
